Key Points <ul> <li>Lolly with break- resistant handle and cleansing pad comprised of polyester fibres used to gently lift, bind, and remove slough and debris (including biofilm) from the wound bed.</li> <li>When used with a gentle scrubbing motion on the wound bed, the fibres remove and retain debris, biofilm, and exudate with minimal or no pain and no damage to viable tissue.</li> <li>Use to cleanse wounds with depth, undermining, sinus tracts or tunnels.</li> <li>May be used as the only method of debridement or in combination with other methods (e.g., autolytic debridement).</li> <li>Treatment can be repeated until wound bed or skin is clean and free from debris.</li> <li>Use Cutimed DebriClean pads for superficial wounds or wounds with initial depth.</li> <li>Wounds with depth, undermining, sinus tracts or tunnels which contain slough and/or non-adherent or lightly-adherent soft necrotic tissue.</li> <li>Wounds with depth, undermining, sinus tracts or tunnels which have biofilm.</li> <li>Hematomas with non-adherent or lightly-adherent debris.</li></ul>	Debrisoft Lolly		
Iift, bind, and remove slough and debris (including biofilin) from the wound bed.         • When used with a gentle scrubbing motion on the wound bed, the fibres remove and retain debris, biofilm, and exudate with minimal or no pain and no damage to viable tissue.         • Used to cleanse wounds with depth, undermining, sinus tracts or tunnels.         • May be used as the only method of debridement or in combination with other methods (e.g., autolytic debridement).         • Treatment can be repeated until wound bed or skin is clean and free from debris.         • Use Cultimed Debriclean pads for superficial wounds or wounds with minimal depth.         Indications       Use under the direction of an NSWOC, Wound Clinician, Physician or Nurse Practitioner (NP) for:         • Wounds with depth, undermining, sinus tracts or tunnels which have biofilm.         • Hematomas with non-adherent or lightly-adherent debris.         Precautions       • May be used on infected wounds in conjunction with appropriate clinical treatment (e.g., antibiotic therapy, antimicrobial dressings).         • If required, soluble Lidocaine gel is compatible with Debrisoft Lolly. A Physician/NP order is required unless there is Health Authority approval for NSWOC or Wound Clinician to order.         Contraindications       • Undow with typosed bone or tendon.         • Cleanst with ablergy or sensitivity to the product's components.         Formats & Sizes       • Loly – monofilament head 5 x 1.9 cm, total length 15.5 cm         Da not cut pad.       To decrease the risk of loase fibres.	Category	Debrider / Mechanical

## **Skin and Wound Product Information Sheet**

2

Directions for Use	Rationale / Key Points
Insert soft, fibre head of Lolly into wound, undermining, sinus tract or tunnel. DO NOT insert into a wound, sinus or tunnel smaller than the fibre head.	Do not insert Lolly further than handle allows to ensure easy removal.
Gently with controlled pressure, use the soft fleecy part of the product in circular motion or sweeping strokes to disrupt and remove non-viable tissue and debris from wound.	Use as much pressure as is tolerated by client.
Use a different Lolly when fibres have collected sufficient slough.	
Dispose of Lolly after use. Do not reuse.	
Use a new Lolly for each separate wound.	Decrease risk of cross-contamination.
If periwound skin shows signs of hyperkeratosis or flakey debris	Refer to Cutimed DebriClean product information
cleanse this area with a Cutimed DebriClean Pad.	sheet.
Cleanse/irrigate wound with sterile normal saline or agency approved wound cleanser.	To remove debris and necrotic tissue.
Cleanse and dry periwound skin.	
Apply dressing as per wound treatment plan.	
Expected Outcome	
Wound bed is clean and free of debris.	If product does not perform as expected notify
Product performs as expected.	NSWOC/Wound Clinician and consider submitted a Product Concern form.
For further information, please contac	t: NSWOC or Wound Clinician
